A Look at Agricultural Trade

U.S. agricultural trade surpluses still rank high despite a slow year in 1998, but there is uncertainty for the future. Despite agriculture's trade surplus shrinking to \$15 billion dollars in 1998 it still ranks number two in positive contributors to the U.S. trade balance second only to the aircraft/ship/train industry. Even though there has been some decline lately U.S. agriculture continues to have a trade surplus with Asia of about \$10 billion. Most of this comes from Japan with \$8.8 billion with China and Korea both quite large at \$2 billion and \$2+ billion annually. U.S. agriculture also has enjoyed a large trade surplus with Europe running at about \$2 billion annually, but 1998 brought a \$500 million dollar trade surplus and a trade deficit could be in the near future. The U.S. also had a deficit totaling \$500 million with the Western Hemisphere despite a \$1.5 billion surplus with Mexico.

Exports of Poultry Down, Eggs Increase

The total export value of U.S. poultry and egg exports for January 1999 was \$116.2 million, down 35% from the same month last year. According to the USDA, total broiler volume for January was 154,093 tons, a 23% decline. Total value for the month declined by \$59 million, to \$101.8 million.

China: Where to Look for the Future

Even though China has seen some better growth in the early nineties than it has over the last couple of years it cannot be overlooked as a major player in the in poultry meat and egg production market. With plenty of room for further expansion and per capita consumption projected to increase in 1999 China will likely be a major global competitor in the future.
